

OT Product Suppliers (OEMs)

PLCs, DCS components, RTUs, industrial switches & firewalls, SCADA/HMI software, engineering workstations, connected sensors

MANDATORY DEADLINE

11 December 2027 — every manufacturer placing a product with digital elements on the EU market must have completed conformity assessment. Reg. (EU) 2024/2847.

“Multiple product lines, thin in-house CRA expertise — and our Important Class II products can’t self-attest. Every line needs its own SBOM, CVD, risk assessment and technical file.”

WHY YOU’RE EXPOSED

Dec 2027 applies to all EU-market products; Important Class II OT needs Notified Body assessment · limited in-house CRA expertise · every line needs its own SBOM, CVD, risk assessment & technical file · US-HQ suppliers need IEC 62443 for global procurement and CRA for the EU.

MILESTONES & DATES

11 Sep 2026 — 24-hour reporting begins
11 Dec 2027 — conformity mandatory; no CE without it
Class II → Notified Body route · NB capacity scarce

SERVICES MOST RELEVANT

SDLA Certification

CSA Certification

CRA Gap Assessment

Technical Documentation

SBOM Programme

Vulnerability Handling

CRA Module B+C

IMPACT IF YOU WAIT

Products blocked from the EU market; the NB queue fills before you reach it. At **16–24 weeks per CSA certification**, a multi-line portfolio cannot clear in the final year.

THE SEQUENCING PROBLEM — A 40-product portfolio at 16–24 weeks per certification cannot be cleared in the last twelve months. Order of operations decides who makes the deadline.

The engagement journey

Start with the gap assessment: it sequences the whole portfolio before the NB queue fills. →

System Integrators

Engineering firms, automation & DCS/SCADA integrators, building-automation and maritime systems integrators

MANDATORY DEADLINE

11 December 2027 — CRA conformity for any product you place on the market · **IEC 62443-2-4** clauses are already live in current tenders. Reg. (EU) 2024/2847.

“62443-2-4 shows up in every procurement contract now — and we carry the liability where one integrated system mixes components with different security levels.”

WHY YOU’RE EXPOSED
62443-2-4 increasingly required in procurement from asset owners · liability where integrated systems combine suppliers with different SL-C · SSA certification is becoming a contractual requirement in EU critical infrastructure · NIS2 propagation pushes owners to demand integrator security programmes.

MILESTONES & DATES
Now — 2-4 clauses live in current tenders
11 Dec 2027 — CRA for products you place on the market
20–30 wks — SSA cert lead time, ahead of bids

SERVICES MOST RELEVANT
IEC 62443-2-4 Advisory
SSA Certification
Gap Assessment (Integrator)
CSMS (own operations)

IMPACT IF YOU WAIT
Excluded from tenders that mandate 2-4 evidence; liability exposure on mixed-supplier systems; competitors win the bid on a certification you don’t yet hold.

THE BID-QUALIFIER SHIFT — SSA certification is now a tender qualifier, not a differentiator. The 20–30 week lead time has to precede your next major bid, not follow it.

The engagement journey

1

62443-2-4 Conformance Assessment

8–12 weeks

2

SSA Certification — flagship system

20–30 weeks

3

Annual surveillance

ongoing

Certify your flagship system first: it becomes the reference that wins the next tender. →

Asset Owners / Critical Infrastructure Operators

Energy, gas & water utilities, oil & gas, chemical, rail, ports, food & beverage and pharma operators with OT

REGULATORY PRESSURE

NIS2 already demands “state-of-the-art” OT security; CRA (11 Dec 2027) raises the bar on every product entering your estate. Reg. (EU) 2024/2847.

“NIS2 and sector rules demand ‘state-of-the-art’ security — but much of our legacy OT has an unknown posture, and the board wants third-party-validated evidence.”

WHY YOU'RE EXPOSED

NIS2 & sector-specific EU rules require demonstrable “state-of-the-art” security · IACSSA/ACSSA certification is the gold standard for proving OT operational security to regulators · legacy OT with unknown / unmanaged posture · board & insurer pressure for documented, third-party-validated evidence.

MILESTONES & DATES

In force — NIS2 obligations (sector-dependent)

11 Dec 2027 — CRA bar on products you procure

12–36 mo — CSMS build; start defines finish

SERVICES MOST RELEVANT

CSMS Design & Implementation

IACSSA / ACSSA Certification

Zone/Conduit Risk Assessment

IEC 62443-3-2

IEC 62443-2-1 maturity

IMPACT IF YOU WAIT

Regulators can't be shown “state-of-the-art”; OT risk grows uninsurable or higher-premium. A multi-year CSMS leaves **no runway** if it begins late.

THE RUNWAY PROBLEM — A CSMS is a 12–36 month build. The certification you'll need for the next audit and insurance cycle has to begin now, from a maturity baseline.

The engagement journey

1

62443-2-1 Maturity Assessment

4–8 weeks

baseline read

2

Zone/Conduit Risk (3-2)

6–12 weeks

per site

3

CSMS Design & Implementation

12–36 months

phased

4

IACSSA / ACSSA Certification

16–24 weeks

per estate

5

Annual surveillance

ongoing

per estate

Begin with a 62443-2-1 maturity read: it scopes the multi-year programme and the board number. →
