

CRA CONFORMITY OPERATIONS PLATFORM

Run CRA conformity as an operation, not a fire drill.

The CRA Conformance Application holds every product with digital elements in one workbench: a guided compliance journey per product, statutory Article 14 clocks running live, Annex VII technical files generated from your own evidence, and blockers ranked before they cost you the CE mark.

STATUTORY DEADLINE

11 December 2027 — full application. From **11 September 2026** reporting obligations are already enforceable — a 24-hour clock, for products already on the market.

WHY TEAMS STALL**Evidence lives everywhere**

Spreadsheets, tickets and engineers' laptops. Nothing is assessment-ready when the auditor asks.

Clocks start without warning

Article 14 gives 24 hours for early warning and 72 for detailed notification — from awareness.

One portfolio, many classes

Default, Class I and Class II each take a different route. Getting it wrong costs the CE mark.

Six modules, one statutory record

01 · OPERATIONS & TRIAGE

Every assessment ranked by priority. An executive intervention board surfaces blocked requirements, overdue statutory deadlines and live incidents in one queue.

02 · PRODUCT DOSSIERS

A registered record per product: type, version, manufacturer, EU authorised representative, intended use — with an eight-step compliance journey and evidence attached.

03 · PSIRT WORKBENCH

Vulnerability surveillance connecting live intake, supplier scans, CISA KEV / CBOM correlation, VEX exploitability analysis and ISO 29147 advisory authoring.

04 · ARTICLE 14 CLOCKS

24-hour early warning, 72-hour detailed notification and 14-day final report, filed through a direct interface to the ENISA Single Reporting Platform.

05 · EVIDENCE & BOM VAULT

A product-isolated repository for specifications, vulnerability reports, architecture and certificates — held to the Article 10(7) ten-year retention duty.

06 · REPORTS

Conformity assessment reports in full and board editions, compiled deterministically from live records and frozen at generation time. Exports to PDF.

BUILT ON THE REGULATION

Annex I Parts I & II · Annex III classification · Annex VII technical documentation · Article 10(7) retention · Article 13(8) support period · Article 14 reporting.

INTEROPERATES WITH

ENISA Single Reporting Platform · Member State CSIRT nodes · CISA KEV · SBOM / HBOM / CBOM formats · ISO/IEC 29147 & 30111 · VEX.

NEXT STEP

See your own portfolio in the workbench.

A 45-minute walkthrough covers classification, the evidence you already hold, and what a defensible Annex VII file looks like for your products.
